EDUCATION

Universidad Tecnológica Nacional – Facultad Regional de Tucumán

San Miguel de Tucumán, Tucumán

University Technician in Programming

December 2025

Key subjects: Data Structures, Algorithms, Software Design and Development, Programming in multiple languages, Version Control, Teamwork, Agile Methodologies.

Academic Commitment: Active participation in collaborative projects and practical training oriented toward labor market insertion.

COURSES AND CERTIFICATIONS

RollingCode

SanMigueldeTucumán,Tucumán

MERN Web Developer

September 2023

Key training: Front-end development with React.js, Design and consumption of REST APIs, Back-end programming with Node.js and Express, NoSQL database management with MongoDB, Version control with Git, Deployment and optimization of web applications.

SKILLS

- Languages: JavaScript, Java, C#
- Front-end: React.js, Next.js, Tailwind Css
- Back-end: Node.js, Express
- Databases: MySQL, MongoDB
- Tools: Git, GitHub, REST API
- Methodologies: SCRUM

Organization

PROJECTS

Reserva de Canchas:

Developed a web application for booking sports fields, implementing a complete CRUD system to manage reservations, users, and schedules. Used React.js on the front-end to create a dynamic and responsive interface, Node.js and Express on the back-end to handle requests and server logic, and MySQL as the database to securely and efficiently store information.

Drugstore Project

Built a web interface for a drugstore, focused on product visualization, categories, and purchase simulation. The development was entirely focused on the front-end using React.js, including state management, product filtering, simulated shopping cart, and responsive design.

Restaurant Reservation Management System

Developed a web application to manage table reservations in a restaurant, allowing users to select date, time, and number of people. Used React.js for the front-end, Node.js with Express for the back-end, and MongoDB as the NoSQL database to store reservations and system configurations. Implemented complete CRUD operations, validations, and a user-centered interface.

Agrochemical Certificates Management System – Ministry of Agriculture (Tobacco Division)

Developed in a team a web application for the Dirección de Agricultura – División Tabaco, designed to manage certificates for companies and advisors handling agrochemicals. The system was built with React.js (front-end), Node.js + Express (back-end), and MySQL Workbench (database). It includes a registration module where applicants can upload information and PDF documents, download certificates, and view performed inspections (with or without fines). We also implemented an employee module that allows managing companies and advisors, validating documentation, and generating inspections.

Personal Website Project for a Medical Professional:

Developed a personal website for a medical professional, focused on presenting their services, specialties, contact information, and appointment booking options. Used Next.js and Tailwind CSS, incorporating responsive design, navigation, and interactive components. The project allowed me to gain practical experience with Next.js and further develop my skills in Tailwind CSS.
